# 1 Users

This section outlines the new features included in the BatchFlow App version 2.23.2.49 release for users updating to the latest version.

## 1.1 New Features

### Refresh License Action

Users can now get recent information regarding subscription with this action after any change in the license acquired.

### Activation Notification

User now get a notification to activate the App which creates a trial subscription for the user and allows user to use the Apps relevant functionality.

### New Release Notification

Users now get a notification if there is a new version of the application available on App Source.

### Activate App Action

Users can now activate the app upon deactivating to resume using App functionality by buying subscription.

### Document Attachment

Users can now post processed invoices from BatchFlow via journals with relevant digital voucher.

## 2 Developers

This section provides a technical overview of the requirements, enhancements, issues and bug fixes included in the BatchFlow App version 2.23.2.49 release.

### 2.1 Requirements

This section highlights the additions done to app as per client requirements

#### Payment Terms Code

“Payment Terms Code” Tag has been added to be included when Exporting Creditor Details. It is achieved by adding “Payment Term Code” as field element in the XML Schema exposing the Creditor Details.

#### Attachment

“Attachment” Tag has been added to be included when Importing Data from BatchFlow. It is achieved by adding “Attachment” sub-tag within the XML structure along with two nested elements <FileName> and <FileContent> to include relevant file details.

### 2.2 Enhancements

This section details the enhancement made to Batch Flow App.

#### Stripe Integration

Users now have an Upgraded version of the App that integrates Stripe Connector which is a jump from local Stripe Functionality. Additionally, this transition also ensures consistency of subscription information.

## 2.3 Issues Fixed

This section identifies and addresses the key issues encountered in both previous versions and the latest implementation of the BatchFlow App.

### Multiple Stripe Customer

The scenario of multiple Stripe Customer has been handled if Customer is already a user of MDCN App with Stripe Connector Integration. To ensure that there is only one Stripe Customer against the User using a combination of MDCN App with Stripe Integration and an Upgraded BatchFlow version, the already created Stripe Customer is being used. The previous subscription is discarded, and a new identical subscription is created instead manually.

### Notifications

The Permission Set for BatchFlow now also has permission for Stripe Connector which gets installed along with the App.

### Setup Page Accessibility

The Setup Page is now visible even after Subscription cancellation along with subscription relevant information. A notification to buy subscription or deactivate the App altogether is also shown.

## 2.4 Bug Fix

In this section, bugs identified in previous versions of the BatchFlow App have been addressed. Each fix is designed to enhance the app's functionality, improve user experience, and ensure a more seamless and reliable operation. The following bug fixes have been implemented in version 2.23.2.49.

## **Payment Method Field Visibility**

Users no longer need to enable and re-enable November First to see payment method fields. Once November First is enabled, the payment method fields will also be visible.
