New Features

Release - 25.1.4.1413

Updated App Monetization

- Integrated Microsoft's monetization model to streamline subscription.

Release - 25.1.4.1642

Word Templates

- Added support for Word templates, enabling dynamic email content generation for greater flexibility and customization. Users can now design highly personalized emails by linking various related or unrelated entities within a single template.

Correspondly Dashboard

- Introduced a new dashboard for Business Manager Role Center that provides insights into sent emails, categorized by email template for better tracking and analysis.

Email Scenarios Assignment

- Added functionality to assign Correspondly-specific email scenarios to designated email accounts. Ensures that emails related to a specific scenario are sent through the assigned account.

Email Scenarios Attachments

- Introduced the ability to attach relevant documents dynamically to specific email scenarios.

Bulk Emailing

- Enabled the ability to send multiple emails simultaneously for selected records with a single click, leveraging job queues to automate the process and significantly reduce manual effort.

Consent for Marketing Emails

- Introduced a new field in the customer profile to record consent before sending marketing emails, ensuring compliance with marketing regulations.

Stop Automation

- Added the ability to disable email automation for specific customers/vendors for selected email templates, offering greater control over email Automation.

Enhancements And Bugfixes

Release - 25.1.4.1257

Compatible with BC Version 25

- Made the app compatible with Business Central version 25.

Release - 25.1.4.1276

Security Enhancements

- Secured source code from unauthorized access.

Release - 25.1.4.1413

Updated Test APP

- Enhanced Test app with automated testing and quality assurance.

Non-Technical Updates

Release - 25.1.4.1413

Logo Update

- Updated the Correspondly App logo.
