New Features

Release (26.1.0.1760)

Fetch Historical Data

- All products—including variants, inventory levels, unit prices, cost prices, VAT and categories—are now imported from Zettle into Business Central.
- Invoices can now be fetched from Zettle based on a user-defined date range.

Zettle Product Mapping

- Imported Zettle products can be mapped to new or existing Business Central items, based on user preference.
- An intelligent automatic mapping feature has been introduced to suggest product mapping with Business Central items to users.
- Users can choose whether to retain Business Central data or overwrite it with Zettle data during the mapping process.
- During invoice processing, if any Zettle Products are not mapped, the connector will prompt the user regarding unmapped products. Upon confirmation, the connector will automatically fetch these items from Zettle and create them as new items in Business Central.

Item Category

- Product categories are now synchronized between Zettle and Business Central.

Low Stock Inventory

- A new low stock count and inventory alert feature has been added. Users can configure these settings within the Mapping Table.

Zettle Revenue Report

- A new revenue report provides detailed insights into Zettle sales posted to Business Central. The report includes individual sales lines, product details, total sales amounts, and quantities.

Unit Cost

- Users can now assign unit costs to products and their variants using the Sales Price List.

Sales Invoice and Sales Credit Memo

- Sales Invoice and Sales Credit Memo pages are segregated.

Enhancements and Bug Fixes

Hotfix Release (25.1.0.1553)

Fixed missing license & permission issues

- Users will be able to utilize the standard Business Central functionality as usual, without requiring the Zettle Connector permission set to access it.

Fixed the issues related to the field lengths

- The discrepancies in field lengths for various fields, such as Item No. and Item UUID, have been corrected.

Release (26.1.0.1760)

VAT Posting Mapping

- The VAT mapping issue has been resolved. A VAT Mapping Table is now available in the store setup, allowing users to map Zettle VAT percentages to Business Central VAT Product Posting Groups.

Uniform length for UUID's

- All UUIDs have been standardized to a consistent length across the system.

Descriptions

- Descriptions for various messages and error notifications have been revised for improved clarity and accuracy.

Sales Document Archive

- The Invoice Archive page has been changed to Sales Document Archive. The captions of fields of Invoice Archive are also changed.

Non-Technical Updates

Patch Release (March 2025)

New product video

- Updated the video url & thumbnail on the AppSource.

Release (26.1.0.1760)

User Guide

- The user guide has been updated according to new features and bug fixes.
