New Features and Changes

Release - 2.24.202445.1102

Refresh License Action

- Users can now get recent information regarding subscription with this action after any change in the license acquired.

Activation Notification

- Users now get a notification to activate the App which creates a trial subscription for the user and allows user to use the Apps relevant functionality.

New Release Notification

- Users now get a notification if there is a new version of the application available on App Source.

Activate App Action

- Users can now activate the app upon deactivating to resume using App functionality by buying subscription.

Document Attachment

- Users can now post processed invoices from BatchFlow via journals with relevant digital voucher.

Release - 26.2.3.1747

Document Processing

- Users can enable document processing to process incoming BatchFlow documents as Purchase Documents with digital attachment.
- Processed documents can be posted via "Batch-Post" action on Purchase Invoice and Credit Memo page.
- "Lookup Document" action on posted Purchase documents page allows user to view them in the BatchFlow Dashboard.

Allow Editing BatchFlow Documents

- Users can enable editing of incoming BatchFlow documents in Business Central (BC).

Document Processing Validation

- Users can see processing errors as “Validation Error Message” against the relevant documents.

Data Retention for Archived Documents

- Documents processed and posted by the user are now marked as Archived.
- Users can choose to delete Archived/Synced records and set a retention period for deletion.

Discontinuing “November First”

- “November First” support has been discontinued which includes support for Refund and Payment documents.

New API for Annex No

- Users can now get Voucher No details of a specific document.

Enhancements

Release - 2.24.202445.1102

Stripe Integration

- This version of the App provides integration with Stripe Connector which is a jump from local Stripe Functionality. Additionally, this transition also ensures consistency of subscription information.

Setup Page Accessibility

- The Setup Page is now visible even after Subscription cancellation along with subscription relevant information. A notification to buy subscription or deactivate the App altogether is also shown.

Mic. Bug Fixes

Release - 2.24.202445.1102

Payment method Field Visibility

- Users no longer need to enable and re-enable November First to see payment method fields. Once November First is enabled, the payment method fields will also be visible.

Release - 26.2.3.1747

Copy/New Company Bug Fix

- Some minor bug fixes related to copy/new company have been resolved.

Release - 26.2.3.1836

Update Archived Documents

- Users can manually process and un process archived documents in the “Batch Flow Imported GL Documents” page to resolve mapping inconsistency after an upgrade.
- Archived Documents can be updated based on their document state using the action “Update Archived Documents”.

Release - 26.2.3.1858

Mark as “Processed” & “Archived”

- Users can now mark older Batch Flow documents as “Processed” and “Archived” using the “Mark as Processed & Archive” action. This is useful for handling records that may otherwise trigger validation issues during processing.
- Users can manually archive and unarchive incoming Batch Flow documents in the “Batch Flow Imported GL Documents” page to resolve mapping inconsistency after an upgrade.

Release - 27.2.3.2929

Updated Stripe Authentication Compatibility

- Resolved the integration issue caused by Stripe’s authentication update by replacing URL-based API key usage with Bearer Token authentication.

Technical Updates

Release - 2.24.202445.1102

Payment Terms Code

- “Payment Terms Code” Tag has been added to be included when Exporting Creditor Details. It is achieved by adding “Payment Term Code” as field element in the XML Schema exposing the Creditor Details.

Attachment Tag

- “Attachment” Tag has been added to be included when Importing Data from BatchFlow. It is achieved by adding “Attachment” sub-tag within the XML structure along with two nested elements <FileName> and <FileContent> to include relevant file details.

Multiple Stripe Customer

- The scenario of multiple Stripe Customer has been handled if Customer is already a user of MDCN App with Stripe Connector Integration. To ensure that there is only one Stripe Customer against the User using a combination of MDCN App with Stripe Integration and an Upgraded BatchFlow version, the already created Stripe Customer is being used. The previous subscription is discarded, and a new identical subscription is created instead manually.

Permissions

- The BatchFlow permission set now includes permissions for the Stripe Connector, which is installed alongside the app.

Non-Technical Updates

Release - 2.24.202445.1102

App Logo

- The App logo has been updated on App Source.
