New Features

Release - 27.1.0.2722

Payment Generation

- Users can create Vipps MobilePay payments for Posted Sales Invoices and Issued Reminders.
- Users have flexibility to choose between QR codes or Web Redirect payment links, offering convenient payment options for their customers.

Payment Status Management

- Users can manually refresh payment status for any Posted Sales Invoice or Issued Reminder to retrieve the latest information from Vipps MobilePay.
- Users can enable Auto Update Payment Status to automatically fetch payment updates at user-defined intervals.

Payment Processing

- Users can process payments manually and can enable Auto Payment Processing to automatically moves invoices and reminders with captured payment status to the Cash Receipt Journal.
- Users can enable Automatic Posting to post invoice entries in the Cash Receipt Journal automatically.

Logging and Retention

- Users can enable logging to capture all communications between Business Central and Vipps MobilePay for monitoring and troubleshooting.
- Users can set the logging preference, choosing to record all events or failures only, depending on their needs.

- Users can enable log retention to automatically remove logs according to the configured retention period and at user-defined intervals

QuickPay Dashboard

- A customized Sales Order Processor role center view is available for users to gain real time insights of Vipps Payment related activities for better decision-making.
