New Features

Release - 26.1.0.2163

Shipment Creation

- Users can create two types of shipments:
 - Document-Linked Shipments - Shipments linked to Posted Sales Shipments for full traceability.
 - Independent Shipments - Shipments created without linking to any Business Central document.
- Users can create a shipment either with Shipmondo agreement or their own agreement.
- Based on specified shipping configurations by the user, shipment supporting different services can be created.
- Users can select Service Point delivery for better flexibility.

Customs Declarations

- Users can create customs document directly as part of the shipment creation process for destinations outside the EU.

Additional Shipping Services

- Users can select extra shipping services such as insurance, cash on delivery, email notifications, SMS updates, and more during shipment creation.

Shipment Quote

- Users can fetch live shipping rates based on shipment details, enabling accurate cost estimates and helping them choose the best carrier and service for each order.

Pickup Creation

- Users can create pickups during shipment booking or after a shipment has been booked.
- Users can create a pickup for multiple or single shipment(s).

Document Management

- Users can work with multiple label formats.
- Labels and customs declaration associated with a booked shipment are being managed within Business Central.

Log Management & Retention

- Two types of logs are being maintained—developer logs for system insights and troubleshooting, and business logs for tracing shipments.
- Users can set up automatic log cleanup with retention policies.

Shipmondo Dashboard

- A customized Sales Order Processor role center view is available for users to gain real time insights of shipping activities for transparent view and better decision-making.

Release - 27.1.0.2601

Return Management

- Support added for Shipmondo Basic Return Portal.
- Return Portals and Return Shipments can be imported manually, or through the scheduled job.
- User can configure portal-specific return policies, including return window, conditions, allowed reasons, and special notes etc.
- Added ability to map or remap a Return Shipment to a Booked Shipment for traceability.

- Status updates supported for Return Shipments: Receive & Inspect, Accept Return, and Reject Return.

Email Notifications

- Email notification support added for Shipment Creation and Return Shipment Retrieval.
- Dynamic shipment creation email templates generated based on the selected configuration.

Enhancements And Bugfixes

Release - 27.1.0.2601

Compatible with BC Version 27

- Made the app compatible with Business Central version 27.

Enhanced Retention Policy

- Enhanced the Business and Developer Logs Retention Policy implementation.
